Field Annotation: LOINC:63929-4; Terminology: NCIT
@HIDECHOICE = 'OTH'

231	<p>[cancer_type_oth]</p> <p>Show the field ONLY if: [cancer_type] = 'OTH' or [cancer_type] = 'C132146' or [cancer_type] = 'OTH_H' or [cancer_type] = 'OTH_S' or [cancer_type] = 'C27134'</p>	Please specify cancer type	text
232	<p>[acute_leukemia_more]</p> <p>Show the field ONLY if: [cancer_type] = 'C9300'</p>	This code is not preferred because it is non-specific. If the patient has a myeloid-lineage acute leukemia (AML, APL, AMML, etc) please go back and select acute myeloid leukemia. If the patient has a plasma cell leukemia, please go back and select plasma cell dyscrasia. Otherwise, please enter the specific details below in the additional cancer details.	descriptive

233	[lung_nos_more]	This code should only be used if you do not know the histology of the lung cancer (e.g., the patient was treated without a confirmatory biopsy) or if the histology overlaps. If you know that the cancer is NSCLC (e.g., adenocarcinoma, squamous cell carcinoma, large cell carcinoma) please go back and select that choice. If you know that the cancer is a low-grade neuroendocrine tumor (i.e., carcinoid), please go back and select carcinoid/NET. If you know that the cancer is a high-grade neuroendocrine tumor (i.e., small cell lung cancer), please go back and select SCLC. Otherwise, please enter the specific histology below in the additional cancer details.	descriptive																																																														
234	[teravolt]	Please consider donating data to the TERAVOLT (Thoracic cancERs international covid 19 cOllaboration) registry, as well. In order to do this, unless you are already part of a member institution, you will need to reach out to Prof. Jennifer Whisenant j.whisenant@vumc.org	descriptive																																																														
235	[multiple_ca]	Does the patient have multiple malignancies? This includes multiple active malignancies as well as historic cancers.	radio, Required <table border="1"><tr><td>0</td><td>No</td></tr><tr><td>1</td><td>Yes</td></tr><tr><td>99</td><td>Unknown</td></tr></table>	0	No	1	Yes	99	Unknown

245	[multiple_ca_more] Show the field ONLY if: [multiple_ca] = '1'	Multiple malignancies - further details. Please provide further details, including whether the primary cancers were synchronous or metachronous, the types of the multiple primaries, etc. Do not record any PHI in this field. As a reminder, this includes all elements of dates other than year.	notes												
246	[breast_biomarkers] Show the field ONLY if: [cancer_type] = 'C4872' or [cancer_type_2] = 'C4872' or [cancer_type_3] = 'C4872' or [cancer_type_4] = 'C4872' or [cancer_type_5] = 'C4872'	Breast cancer specific: What is the breast cancer phenotype? Check all that apply. Instructions: Oncology notes: (Medical, Surgical, or Radiation oncology notes): Information obtained from the most recent oncology note would suffice. Ideally, data entry is from the medical oncologist note, but if not available surgical or radiation oncology notes may also have the details of the information. Confirmation with pathology report is not required (unless the clinic notes fails to comment on both hormone receptors as well as HER2 status). Pathology Reports: If the most recent note is unclear, proceed as follows for assessing pathology reports: For patients with stage IV or metastatic breast cancer, use the receptor information from the most recent biopsy of the metastatic site, if unavailable, can use information from primary surgery or initial diagnostic biopsy. For stages I-III breast cancer, use information from surgery if available, otherwise use information from initial diagnostic biopsy. Hormone receptor (HR) status: Hormone receptor (HR) can refer to Estrogen receptor (ER) and/or progesterone receptor (PR). Any estrogen-receptor (ER) or progesterone-receptor (PR) expression above 1% on immunohistochemistry (IHC) is considered positive. HER2 Status: Positive: HER2 is considered positive if described as "overexpressed" or "3+ positive" by IHC or "amplified" by FISH. Of note 0 or 1+ by IHC is considered negative. If IHC is described as 2+, please refer to FISH results or final interpretation for the HER2 results. Positive FISH results (described as positive or amplified) always supersede IHC results, if there are discrepant results between the two.	checkbox <table border="1"> <tr><td>ER</td><td>breast_biomarkers__er</td><td>Estrogen and/or progesterone-receptor positive (ER or PR positive)</td></tr> <tr><td>HER2</td><td>breast_biomarkers__her2</td><td>HER2 overexpressing (HER2 positive)</td></tr> <tr><td>TNBC</td><td>breast_biomarkers__tnbc</td><td>Triple-negative breast cancer (ER, PR, and HER2 negative)</td></tr> <tr><td>99</td><td>breast_biomarkers__99</td><td>Unknown</td></tr> </table>	ER	breast_biomarkers__er	Estrogen and/or progesterone-receptor positive (ER or PR positive)	HER2	breast_biomarkers__her2	HER2 overexpressing (HER2 positive)	TNBC	breast_biomarkers__tnbc	Triple-negative breast cancer (ER, PR, and HER2 negative)	99	breast_biomarkers__99	Unknown

98	Treatment was initiated for the first time AFTER the COVID-19 diagnosis																													
99	Unknown																													
257	[treatment_modality]	Anti-cancer treatment modality. Check all that apply. You should check any modality that was given as part of the most recent course of therapy, not treatments given in the more distant past. For example, if a patient received concurrent chemoradiation, check cytotoxic chemotherapy and radiotherapy. If a patient received neoadjuvant chemotherapy followed by surgery, you should check cytotoxic chemotherapy and surgery. When in doubt, please provide additional details in the free text boxes below. Definitions Cytotoxic chemotherapy: drugs that have direct toxic effects on the cellular reproduction apparatus (e.g., anthracyclines, taxanes, vinca alkaloids, etc.). Immunotherapy: drugs or cellular therapy that primarily act through upregulation of the immune system (e.g., immune checkpoint inhibitors, allogeneic hematopoietic stem cell transplant, BiTEs, CAR-T-cells). Endocrine (Hormone) therapy: drugs that inhibit, mimic, or replace endocrine processes (e.g., tamoxifen, aromatase inhibitors, octreotide). Targeted therapy: drugs that interfere with specific cellular proteins through blockade (e.g., monoclonal antibodies) or disruption (e.g., tyrosine kinase inhibitors). Note that monoclonal antibodies that do not have a direct immunostimulatory effect (e.g., rituximab, bevacizumab, etc.) should be selected as "Targeted therapy", as should immunomodulators (e.g., lenalidomide) and drugs that target specific cellular proteins (e.g., venetoclax, ibrutinib).	checkbox, Required <table border="1"> <tr><td>685</td><td>treatment_modality__685</td><td>Cytotoxic chemotherapy</td></tr> <tr><td>694</td><td>treatment_modality__694</td><td>Immunotherapy</td></tr> <tr><td>58229</td><td>treatment_modality__58229</td><td>Targeted therapy</td></tr> <tr><td>691</td><td>treatment_modality__691</td><td>Endocrine (Hormone) therapy</td></tr> <tr><td>695</td><td>treatment_modality__695</td><td>Radiotherapy</td></tr> <tr><td>14051</td><td>treatment_modality__14051</td><td>Surgery</td></tr> <tr><td>45186</td><td>treatment_modality__45186</td><td>Transplant/Cellular therapy</td></tr> <tr><td>45215</td><td>treatment_modality__45215</td><td>Intravesicular therapy (e.g., BCG)</td></tr> <tr><td>OTH</td><td>treatment_modality__oth</td><td>Other</td></tr> </table> <p>Field Annotation: Terminology: HemOnc</p>	685	treatment_modality__685	Cytotoxic chemotherapy	694	treatment_modality__694	Immunotherapy	58229	treatment_modality__58229	Targeted therapy	691	treatment_modality__691	Endocrine (Hormone) therapy	695	treatment_modality__695	Radiotherapy	14051	treatment_modality__14051	Surgery	45186	treatment_modality__45186	Transplant/Cellular therapy	45215	treatment_modality__45215	Intravesicular therapy (e.g., BCG)	OTH	treatment_modality__oth	Other

282	[stage]	Stage at cancer diagnosis. If the patient has multiple primaries, please report on the cancer that was most recently treated. If the patient has a solid tumor but you cannot determine an exact stage, try to determine whether the disease was localized or disseminated at diagnosis. Clues to localized disease at diagnosis include definitive therapies such as lumpectomy for breast cancer, colectomy for colon cancer, and prostatectomy for prostate cancer. If the patient was initially diagnosed with <i>in situ</i> cancer but then developed invasive disease, please report the stage at the time of invasive disease diagnosis. For hematologic malignancies that are not anatomically staged (e.g., leukemias, myeloma), select localized or disseminated based on the distribution of the disease. For example, multiple myeloma would be disseminated, whereas a solitary plasmacytoma would be localized. Most leukemias are considered disseminated at diagnosis, with very few exceptions.	radio <table border="1"> <tr><td>1004-0</td><td>0 (<i>in situ</i>)</td></tr> <tr><td>1</td><td>I</td></tr> <tr><td>2</td><td>II</td></tr> <tr><td>3</td><td>III</td></tr> <tr><td>4</td><td>IV</td></tr> <tr><td>764-1</td><td>Localized</td></tr> <tr><td>764-7</td><td>Disseminated</td></tr> <tr><td>OTH</td><td>Other</td></tr> <tr><td>99</td><td>Unknown</td></tr> </table> <p>Field Annotation: Terminology: NAACCR</p>	1004-0	0 (<i>in situ</i>)	1	I	2	II	3	III	4	IV	764-1	Localized	764-7	Disseminated	OTH	Other	99	Unknown
